General Features

	<p>- Application settings will allow you to adjust the software according to your requirements and needs.</p> <p>Settings > General</p> <p>Turn on/off Hungarian User Interface</p> <p>Choose default software keyboard</p> <p>- Define keyboard looks (Skin,Font size and style) and set the language you want to write in. Multiple</p>
---	---

languages can be used, just *Add* them from the list, over 50 languages available.

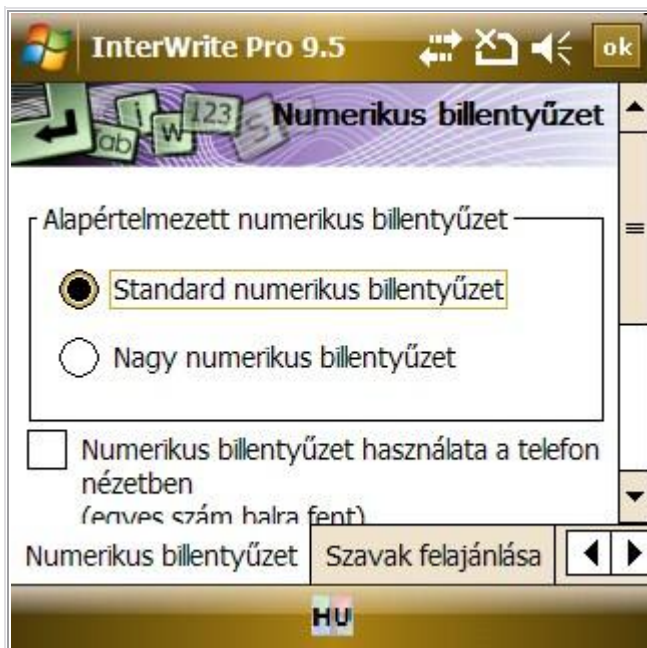

Settings > Keyboard

Hungarian is set by default. If you want use hardware keyboard for Hungarian characters input, keep the hardware support turned on.

- The result is InterWrite Keyboard will provide you with layout for **required national language**...or any other you need.

-To quickly **switch from keyboard layout of one language to another**, use the language panel button at the bottom which also indicates which language keyboard is currently active (HU). Touch the arrow shaped button.

-Define how you want **numeric part of keyboard** to look like. An external calculator application can be defined. Just press ... button and import.

Settings > Numeric Keyboard

-Word suggestion options for better word input management.

Settings > Suggest words

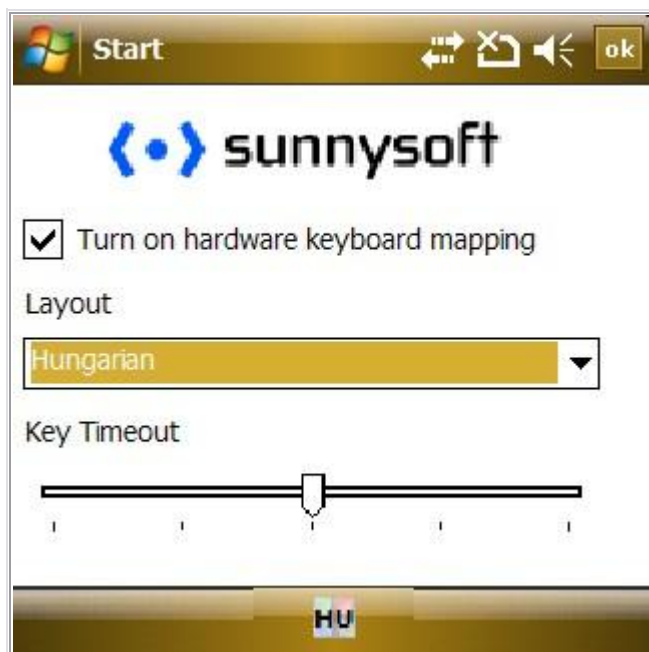

- Further keyboard options available in:

Settings > Keyboard options

- **Gestures** can be made by dragging the stylus in certain direction on keyboard, resulting in accented or character appearance. Define what gesture results in what character. (E.g. Drag stylus pressing it in upper right direction to achieve CAPITAL of the letter whose key you were starting the gesture from.)

Settings > Keyboard Gestures

You may input Hungarian character like on usual PC keyboard via your i780 hardware keyboard

Keep turned on hardware keyboard mapping to map keyboard like on usual desktop. To map keyboard like on device description, turn off mapping.

Please note, if this support is turned off, you cannot input Hungarian characters via hardware keyboard
